

SIMPLE. SAFE. LIVING. 2019-2020

DEAR PFANNER CUSTOMER,

almost nothing shapes our lives as much as safety. This applies equally to us privately and at work. That is why we present to you in the new PFANNER® catalogue, with over 200 items, the entire range on the topic of protective clothing.

On 240 pages with: Many range classics that simply convince as they are, many product optimizations, even more perfect than ever, and surprising short portraits of some customers – authentic and from the midst of the daily grind. For example, a passionate hunter explains what is important for the clothing in his profession (P. 160) and Lumberjack Volker provides a fascinating insight into his working life (P. 30) .

We are dealing with people who approach their limits every day, who face harsh working conditions or maintain strenuous hobbies in the great outdoors. For all those we set standards for protective clothing – reduced to the essentials, pleasant and functional to wear and with the best design. True to our motto: Simple. Safe. Living.

Whether you will now skim through our catalogue, sift through page after page or search specifically for your product highlight: Have fun exploring!

THERE IS ALWAYS SOMETHING TO DO

More space

The demand for our products has always been and still is increasing. To meet this demand professionally, we are continually investing in rationalization and we continuously expand our storage capacity – with purely natural materials. The additional space provides enough room for our wide product range and our future innovations. With more than 3,000 m² of warehouse space and over 12,000 pallet places, our employees are committed to our customers.

New products

Look forward to our novelties and improvement highlights, because we have qualitatively optimized many popular products and expanded them to include a number of innovations – from head to toe.

Protos® Integral has earned international recognition

Introduced in the market in 2012, the Protos® Integral has now made it internationally. At trade fairs such as the "SMM" in Hamburg, the "Global Petroleum Show" in Calgary or the "Oil & Gas" in Rio, the Protos® moved increasingly into the focus and earned unprecedented acclaim. The fact that the safest head protection in its class has also established itself globally, is confirmed by major contracts outside the DACH countries (Germany, Austria and Switzerland). As a result, we are now equipping not only more local construction companies, but also mines in Chile or forestry workers in New Zealand. Through the continuous developments, such as the Protos® Integral Safety Glasses and the CrashAbsorber made of Koroyd®, we are gaining the confidence of safety officers and convince even the last sceptics of the new dimension in terms of safety and comfort.

Pfanner at trade fairs

Visit us, talk to us and, above all, assure yourself of us. We would be glad to share a personal conversation at our booth. We look forward to a lively exchange with you and are curious about your feedback. You will find us at many important trade fairs throughout the year. Dates and further information can be found at www.pfanner-austria.at

WE ARE EXPERTS

Customised and innovative solutions require expertise and the knowledge of current technologies and options. Through our proprietary and patented technologies, we have the right solution for every application and stand out due to our individuality.

Simple.

User-friendly, tear-resistant and easy-care functional clothing is a top priority for us. Because that's what defines not only the quality of the materials but also their longevity. The clothing is thus tailored to your particular application. No unnecessary pockets, no unnecessary seams. Everything is exactly where it belongs. The handling is clear and self-explanatory. Our service is also personal and uncomplicated, with which we respond to your questions and requests.

Safe.

We are continuously pushing technical expertise and advancements. The benefit of the latest technical capabilities, combined with innovative ideas, help us to realize new inventions that we develop for your safety. Exceptional quality is not a luxury for us, but rather an essential for your life. Enduring and detailed test phases are an obligation for us, if you entrust your life to our products. Optimal protection and maximum safety are thus always our priority.

Living.

Life and experience are paramount. Comfort, function and protection are indispensable in daily extreme situations. Quality you can trust – in all regions from north to south.

We manufacture under humane and certified conditions in Europe and only use pollutant-free products. Our employees and suppliers also appreciate this.

Gladiator®

The extremely tear-resistant outer fabric meets the highest demands. Water-repellent, oil and dirt resistant. Available in all Gladiator® and Ventilation pants.

StretchFlex®

The proven StretchFlex® technology ensures a perfect fit and enhanced breathability, thus providing maximum comfort.

KlimaAIR®

Patented rear ventilation system for cooling in summer and thermal insulation in winter. This fabric is used in different thicknesses for shoes as well as jackets and pants.

Nanoshield®

Water and stain repellent leather. Extremely easy to clean, resistant to natural acids. Available in all Nanoshield® shoes.

StretchAIR®

Breathable stretch fabrics keep you comfortable during physical exertion. Used with various additional equipment from jackets to functional shirts or pants.

3CON®

The 3CON® reflective strips and icons ensure maximum light reflection properties on all fabrics. These provide additional security through increased visibility.

StretchZone®

Elastic fabric inserts provide more freedom of movement and comfortable wear for jackets and pants. Work wear with added value.

100% MembranFREE

Doing without any membranes enables maximum breathability, thus reducing considerably the moisture formation on the foot.

Zipp4Fit®

Patented Zipp4Fit® zip closure system for flexible adaptation to the wearer.

Zipp2Zipp® zip system

Enables sensationally convenient access to the sorting compartments.

AEQUALITAS – Equality®

Absolute equality for right and left-handers. Sophisticated sorting compartments hold all utensils in place.

Holzer

Axe and Picaroon - the forestry equipment for a successful day's work in the forest. Both tools are united in our well thought-out Holzer emblem.

ESPECIALLY FOR KIDS

In our children's section we have put together our products for your little ones: various children's jackets, high-quality T-shirts and practical trousers.

Protos® Inuit Children's Jacket

- Knitted look with dirt-repellent impregnation
- Soft flannel next to the skin
- Waterproof shoulder reinforcement
- Reinforced elbows
- 3CON® Reflex for better visibility
- With collar and extended back
- Extra large inner pockets
- Zipp4Fit® zip

The outer fabric of the Protos® Inuit kid's jacket is smooth knitted and protected from dirt by an impregnation. The inner is made of soft flannel. The Protos® Inuit Children's Jacket features water-repellent shoulder padding, reinforced elbows, a side zip for a better fit and comfort. The collar and extended kidney area protection protect against the cold and the 3CON® Reflex on the back provides optimum visibility.

READY FOR EVERY SPECIAL MISSION

The Protos® protects in unprecedented dimensions. The special feature is that all the Protos® models have the same shell and can be upgraded and equipped for other purposes, with special accessories, such as the Protos® Integral Safety Glasses, using a simple modular principle. But despite all their individuality, the various types have one thing in common: Upmost safety, best wear comfort and the unique technology standard were the priorities during development.

The Protos® Integral is protected by numerous national and international patents. Further patents, in particular for the interior equipment, the visor (incl. face mask with elastic damping and sealing lip) and the CrashAbsorber are pending and partially already granted.

Protos® Integral Advantages	P. 12
Protos® Integral Industry	P. 17

Protos® Integral Arborist	P. 29
Protos® Accessories	P. 33

MAXIMUM SAFETY

Thanks to the certification according to EN 397, EN 1078, EN 1077 and EN 12492, the "Protos® Integral System" can be employed within seconds for forestry, arboriculture and climbing applications. Chin strap, visor, neck protection, ear protection – everything is integrated and simultaneously modular.

10× more safety

- 1 – **Largest field of view** compared to all tested helmets on the market with maximum visibility all-round.
- 2 – The **neck protection shell** protects the back of the head in case of falling or impact and averts the risk of skull base fracture.
- 3 – The athletic 2-color combination offers a viewable area expanded by 35 %. Thus, the significantly **increased visibility** provides the wearer with a great advantage in poor visibility conditions (leaves, coniferous forest, sunlight, etc.) in all seasons.
- 4 – The special **damping structure** (3-point suspension and shock absorber) of the inner shell dampens shocks and prevents transmission directly to the head or spine.
- 5 – With the first-time certification according to the standards EN 397 and EN 12492, the Protos® offers not only **protection against vertical impact**, but also with respect to **horizontal impact**. This results in a new type of "all-round protection".
- 6 – Due to the ingenious **inner shell**, the Protos® fits perfectly on the head. In case of exposure to a force, the energy is distributed over a large area and absorbed.
- 7 – Since the hearing protection is always situated within the outer shell, in both the active and the passive state, it also serves as an **additional shock protection**.
- 8 – The **safety ventilation gate** provides multiple safety features at the point where it matters most. Horizontal and vertical impact is absorbed by the additional shell before the forces act on the outer shell.
- 9 – 5× impact absorption by the **CrashAbsorber**. Thanks to 95 % air and 5 % Koroyd® the airflow is only slightly impaired. The CrashAbsorber makes the effects of the impact visible and indicates when the carrier should replace the head protection.
- 10 – The Protos® Integral **Safety Glasses** are characterized by their unique (mechanical) strength: Temperatures from -5 °C to +55 °C are completely unproblematic. The position of the glasses can be individually adjusted to any head shape. The glasses are clipped to the head band so that they are always there. The active or passive state can be changed with just two fingers in no time.

TOTAL COMFORT

The Protos® is the perfect combination of functionality and comfort. The many intelligent details make for easy handling, perfect fit and comfortable wearing.

10x more comfort

- 1 – With **integrated hearing protection**, there are no protruding attachments, with which you can get stuck in branches. The variable contact pressure on the ear muff hearing protection holder allows precise adjustment.
- 2 – Two major advantages of the **integrated face protection**: Work without getting caught in branches or thorns and a maximum all-round view.
- 3 – Better grip on the head due to a profound, adjustable **neck shell**. The Protos® thus also sits securely on the head even without a chin strap.
- 4 – The special design ensures an **active ventilation** (air can flow enter from any angle and is released via the ventilation ducts on top). The ventilation ducts on the upper side can be opened or closed by a slide. This way, it is possible to adjust the Protos® optimally to hot/cold/humid weather.
- 5 – In order to ensure that the chin strap does not slip under the hearing protection, we have attached a **special guide** on the neck shell. Wearing comfort and noise absorption are thus not adversely affected.
- 6 – Excellent sweat transport through broad support pads with **KlimaAIR® technology**.
- 7 – The **patented size adjustment** allows quick fitting and removal of the Protos® Integral thanks to easy handling. Once a size has been set, it will remain so, which means that no readjustment is necessary.
- 8 – All functions can be **operated with two fingers only**. Even the hearing protection which can be shifted from the active state to the integrated garage between the head and the outer shell.
- 9 – The complete **KlimaAIR® set** can be removed and is machine washable at max. 30 °C. For hygiene reasons, we recommend washing the main support pads regularly and replacing them after 2–3 years at the latest.
- 10 – **Perfect communication** even over long distances and loud ambient noises. The Protos® BT-COM IV Communication System makes this possible.

PROTOS® INTEGRAL INDUSTRY

No matter whether for structural, underground, or road constructions as well as canal and tunnel work or other industrial activities – when the head is in danger, the proper protection according to EN 397 is indispensable. The Protos® Integral Industry has been developed for these daily applications and beyond them. Unprecedented wear comfort and safety that surpasses all standards by far, protect the head better than ever. Thanks to the modular principle, the Protos® Integral Industry can also be upgraded for other missions at any time. A head protection for all application areas.

An identification based on the head protection is essential, especially for the industrial sector. Therefore, the Protos® Integral Industry is available in 8 different basic colours: Red, blue, yellow, orange, white, green, olive and black, as well as various colour films. Further customization and a colour differentiation between the ventilation gate and the outer shell are of course also possible.

Protos® Integral Industry

The Protos® Integral Industry does not only provide an unobstructed field of vision, but also protection against vertical and horizontal impact. With its 20-step size setting on the patented quick-release neck shell, the Protos® sits securely on every head, even without a chin strap. An ideal air circulation between inner and outer shell keeps the head cool. The air flow can be regulated using the ventilation gate. The KlimaAIR® main support with energy absorption ensures perfect wearing comfort.

PROTOS® INTEGRAL FOREST

The Integral Solution makes the Protos® Integral Forest unique. All components have been integrated within the helmet shell, so that it is no longer possible to get stuck on branches, bushes or other obstacles. The Protos® was developed specifically for the forest and is tailored to the most dangerous area of application. The 2-color design ensures increased visibility and the profound neck shell protects the back of the head in case of an impact or fall. The ventilation gate not only offers a plus in wear comfort but also serves as an additional bumper in case of impact, before the forces act on the main shell.

Patented solutions, such as the etching metal visor, which does not restrict the field of vision, and the integrated hearing protection complete the Protos® Integral Forest.

The Protos® Integral Forest and its accessories is certified in accordance with EN 397, EN 352-3 and EN 1731 S.

Holzer logo now also on
the Protos® Integral as an
individual sticker.

Protos® Integral Forest

The forestry sector and its extremely variable requirements were the starting point for the development of the Protos® Integral principle. Because branches and other objects in the forest are very likely to get caught on components of head protection, all parts of the Protos®, from the visor to the hearing protection are integrated and make it impossible to get caught up. With the certification in accordance with EN 397, EN 352-3 and EN 1731 S, the Protos® Integral Forest and its accessories is the perfect choice for the toughest applications and extreme weather conditions. Even when the hearing protection is in passive position, the Protos® holds perfectly on the head.

PROTOS[®] INTEGRAL CLIMBER

If the standard (work situation) prescribes a head protection in accordance with EN 12492, the Protos[®] Integral Climber is the first choice. It is also suitable for the technical rescue for accident and from heights. Thanks to the modular principle, the Protos[®] Integral Climber can also be equipped for other missions. The profound neck shell of the Protos[®] Integral prevents slipping, even when working overhead. The Protos[®] Integral Climber is equipped with the CrashAbsorber. This consists to 95 % of air, offers 5-times shock absorption and leaves the air circulation in the Protos[®] unaffected.

The incomparable wear comfort and the enhanced safety also make the Protos[®] Integral Climber perfect for use on the ground.

Zenith STX Mountaineering Boots, Size 42

PROTOS® INTEGRAL ARBORIST

The perfect fit and optimum hold of the Protos® Integral Arborist make it perfect for work at height, where face protection is indispensable. The hearing and face protection are integrated into the shell of the head protection and thereby prevent snagging on branches and protruding parts. The special design of the Protos® Integral allows the cooling air to flow in from all sides and to escape through the ventilation gate. This ensures that the head does not collapse even during the most strenuous activities. After tiring work the KlimaAIR® Set can be exchanged and washed at 30 °C to maintain the hygiene. The guide of the chin strap is designed so that it cannot slip under the hearing protection where it would affect the noise reduction or the wearing comfort. The Protos® Integral Arborist is of course certified according to EN 397, EN 1078, EN 1077 and EN 12492 and its accessories EN 352-3 and EN 1731 S.

Protos® Integral Arborist

The Protos® Integral Arborist is designed for working at heights. In an environment that requires maximum concentration and attention, the head protection must not interfere and must not slip unintentionally. Thanks to its far-reaching neck shell, the head protection fits perfectly even when working in sloping or overhead positions, thus providing a safe hold. The entire modular principle can be adjusted with only two fingers. This model is also equipped with a chin strap.

Version with Protos® Integral Macclip chinstrap (Item 204043)
Certified according to EN 1078 bicycle helmets and EN 1077 ski helmet, class B.

P. 42

For safety reasons, the outer Protos® shell should be replaced every 5 years (starting from the manufacturing date). This is available separately. For hygiene reasons, we recommend washing the main support pads regularly and replacing them every 2–3 years in case of daily use.

Volker Hagmeier is involved in agriculture and forestry. In Geislingen an der Steige, near Göppingen in Baden-Württemberg, his business is an important service provider and producer for the region. We asked him about his work and he let us know why he relies on Pfanter products.

Volker, you are engaged in agriculture, without directly cultivating fields yourself. Please tell us about your business model.

That's right. We do not grow anything ourselves, but are a service provider for other agriculturalists – namely as an agricultural wage manufacturer.

What does that mean exactly?

We process the grain of different agriculturalists to produce feedstuff for their livestock or mix it into flour in our mixing plant. The advantage here for our customers is that they do not have to operate the complex plants, but can concentrate on their "core business", the cultivation and harvest. We then take the harvest and process it further to obtain the desired products.

How many customers do you supply in this way?

We are currently working for about 250 to 300 different companies that come from within radius of about 60 kilometres around Waldhausen. We deal with everything with 2 employees and a part-time employee.

And you yourself are not involved in agriculture?

No, we have 10 hectares of land, but we have leased it. At one point we specialized on processing of the products of our colleagues, rather than on the production. This fits for us well and there is a strong demand for our service.

But we cannot operate entirely without any craft activity. In addition to the wage manufacturer there is also the forest enterprise in which you are active yourself.

That's right. We administer a considerable forest area. Here we cut down wood, for example, on behalf of the State of Baden-Württemberg – even up to 15,000 solid cubic meters annually. In addition, of course, the entire forest is maintained by us from A to Z, which starts at the forestation and then ends with felling.

The employees are hopefully well protected with appropriate work wear.

Of course. All of them wear Protos® and chainsaw protection pants from Pfanter. We have even already tested the Protos® with wireless connection to communicate optimally at work.

How long have you been a Pfanter customer?

With one break, for 11 years now.

Break?

Yes, there was a change of supplier a few years ago. At the point we had briefly become "apostate". But now Pfanter fully involved once again. By the way, this also concerns the wage manufacturer where it is less about safety than about appropriate comfort. Here, the work pants from Pfanter are the perfect solution. And we will now stay with it.

That's a good resolution. Thank you for the talk.

EN 166 FT
ANSI Z87

Protos® Integral Metal Visor F39/G16 / Clear Visor

The etch metal visor and the clear visor for the Protos® Integral fit precisely on the head protection. Through this fit, there are no protruding parts or cavities, in which branches and debris can get caught. The patented rubber edge on top of the visor prevents liquids, dust and rain from penetrating from above, and lets them drain away on the left or right side of the visor. The Protos® Integral Clear Visor is an extremely lightweight polycarbonate visor.

Furthermore, the Protos® Integral Clear Visor is fully operational even in extreme temperatures from -5 °C to +55 °C, allowing an all-year use. The polycarbonate visor is tested and approved according to EN 166:2002 protection class 1FT and offers a UV protection filter.

Further national and international patents and designs for the visor (incl. face mask with elastic damping and sealing lip) are pending.

ANSI Z87.1

Protos® Integral Safety Glasses
with Optical Insert

Protos® Integral Safety Glasses

The Protos® Integral Safety Glasses are suitable for any head. Since the temple is length- and angle-adjustable, they can always match the size of the head. They can be adjusted individually and according to personal needs. Regulate the soft nosepiece according to the nose width is also extremely easy. This ensures that the glasses are back-ventilated.

Highest mechanical strength at extreme temperatures according to EN 166:2002 is not a problem for the Protos® Integral Safety Glasses. This applies both to the visor and to the temples. Therefore, these glasses are extremely sturdy despite their light weight. In addition to stability, the glasses are also equipped with a protective UV filter according to EN 170:2003 as well as a sunscreen according to the standard EN 172:2002. Thus, the eyes do not risk being harmed by the invisible dangers of sunlight. The glasses are directly connected to the inner shell and do not interfere with the comfort and sound insulation when the hearing protection is used.

Depending on the colour, the glasses provide further features:

Clear

- Antifog
- Optical quality grade 1
- Light transmittance 91 %

Yellow

- Antifog
- Optical quality grade 1
- Light transmittance 85 %

Orange

- Antifog
- Optical quality grade 1
- Light transmittance 75 %

Grey metallised

- Optical quality grade 1
- Light transmittance 13 %

National and international patents and designs are pending and partially already granted.

Item 204090

0 30 50 60

Optical Insert

The Optical Insert has been specifically designed for the Protos® Integral Safety Glasses. It can be easily clipped to the bridge of the Protos® Integral Safety Glasses. Your optician can easily mount optical lenses up to +/-4 dioptries into the glass insert. The lenses are fully protected, as they are placed behind the protective glasses. A major advantage of the integrated glass insert is that no temples interfere with the ear protector, and hence do not exert any uncomfortable pressure on the head.

Item 204094

- 2C 2C UV protection filter with improved colour recognition according to EN 701:2003
- 5 Sun protection filter according to EN 712:2002
The number after the hyphen indicates the degree of tinting – the darker it is, the higher the value
- 1 highest optical quality – ideal for continuous use
- FT highest mechanical strength to be achieved at extreme temperatures according to EN 661:2002 (-5 °C to +55 °C), this applies to the protective pane as well as to the brackets
- N Antifog

Protos® Headset Integral

- The most comfortable headband without causing pressure points on the head
- No protruding parts
- Extremely light
- Practical to store
- Can be combined with BT-COM and Protos® Integral Safety Glasses

With the Protos® Carrier Air Integral you are equipped for every application. By simply combining it with BT-COM (and Protos® Integral Safety Glasses), the headband can be individually adjusted to any situation, making it the ideal companion.

Due to its extremely light construction and the special support pads and their special placement on the headband, no pressure points can arise. Nevertheless, the headband remains where it is and does not slip, no matter in what position, guaranteed.

ORDER THE MACLIP LIGHT ALONG WITH YOUR PROTOS® – WE TAKE CARE OF A PERFECT MOUNTING

Protos® Maclip Light (left)

Protos® Maclip Light (right)

Protos® Maclip Light mini

Protos® Maclip Light / Protos® Maclip Light mini

The Maclip Light is an LED safety light that is mounted on the outside, left or right, of the Protos®. This lamp, which is not conductive, has been certified by DEKRA. In addition, it is explosion-proof according to ATEX zones 1 and 21. Thanks to a light flux of around 120 lumens, the lamp provides enough illumination for the majority of tasks. The Maclip Light is mounted on the Protos® via a magnetic system. However, this system is also suitable for the belt clip.

The Protos® Maclip Light mini provides 30 lumens, is 100% waterproof and can be used on both sides. Furthermore, the Protos® Maclip Light mini is explosion-proof according to ATEX Zone 1 and DEKRA.

Installation of the Maclip Light Protos® Holder is only possible via the Protos GmbH or your specialist retailer.

Protos® Integral Maclip Chin Strap
Chin strap with a magnetic closure system

EN 397
EN 1077 B
EN 1078
EN 12492

Protos® Integral Maclip Chin Strap

The chin strap fits the shell of the Protos® Integral. The chin strap can be attached to the prefabricated loops of Protos® using the insertion buttons. Thanks to the strip guide on the neck shell, the chin strap will always fit smoothly. Moreover, it cannot slip under the Hearing Protection Support.

Item 204043

In case of daily use, we recommend replacing the chin strap every 1–2 years.

Protos® Integral Neck Protection

The neck protection for the Protos® Integral is available in different colours. All variants of the neck protection for the Protos® Integral are made of high-quality 3-layer SympaTex performance fabric. Thanks to its material and shape, the neck protection prevents dirt and liquids from reaching the neck. Moreover, the neck protection itself is dirt- and water-proof, which makes it easy to clean. The neck protection can be attached via a simple clipping to the neck shell of the Protos®. Due to its special positioning, it does not block the exchange of fresh air.

KlimaAIR® Sentinel Jacket

- KlimaAIR® even in the sleeves
- Water- and dirt-repellent outer fabric
- Extended back
- Detachable sleeves
- Waist adjustable in 3 steps using press studs
- 3CON® Reflex
- Reflective Paspol stripes

The long cut and optimal fit make the KlimaAIR® Sentinel Jacket highly functional. The KlimaAIR® technology ensures maximum ventilation and is also the perfect insulation – even in the sleeves. Thus, the jacket is the perfect armour for strenuous activities and a wide range of temperatures. Thanks to the zip-able sleeves, this jacket can also be worn as a vest if necessary. Furthermore, this zip serves as an adjustable ventilation.

KlimaAIR® Sentinel Vest

- Water- and dirt-repellent outer fabric
- Extended back
- KlimaAIR® technology
- Waist adjustable in 3 steps using press studs
- 10 functional pockets
- 3CON® Reflex
- Reflective Paspol stripes

The KlimaAIR® technology is processed in the back and chest area of the Sentinel Vest. This reliably ensures optimal wear comfort. In combination with the ten functional pockets, the water- and dirt-repellent outer fabric makes the vest versatile and a true storage wonder. The extended back and the 3CON® technology round off the Sentinel Vest.

Wooltec Hooded Jacket

The low-noise characteristics make the Wooltec Jacket perfect for hunting, where silent movements are essential. But the Wooltec Jacket is also a perfect companion for other outdoor activities. This way, the wear comfort is retained, without the loss of body heat. The upstanding collar prevents the penetration of dirt and protects against wind gusts. The Wooltec Jacket is made from 100 % merino wool. This wool does not absorb odors and does not scratch the skin. The zipper is equipped with a chin protector to prevent scratching the chin.

The small Baden-Württemberg community Urspring is located to the north of Ulm. It was already well-known in Roman times because of its source and its strategic location.

Urspring is also the home of Gert Binder. He is an agriculturalist and forester, drives trucks and has trusted Pfanner protective clothing for the past six years. However, this was not always the case.

Gert, how did you come to Pfanner and why you were skeptical beforehand?

I had never previously bought anything from Pfanner, because it was always too expensive for me. Then, on my 50th Birthday, I received some Pfanner chainsaw protection pants from my friends. And that changed everything. I was convinced by the quality and functionality in such a way that I have only bought from Pfanner since.

The price-performance ratio is thus correct in your opinion?

Yes, absolutely. Although other products are cheaper. They, firstly, do not last as long and, secondly, they are of significantly lower quality and, thirdly, they do look not as good.

Where do you employ protective clothing from Pfanner?

Primarily, of course, for work in the forest. Here, the chainsaw protection pants and my Protos® are worth gold. But I also swear on Pfanner for my fieldwork.

How big is your company here in Urspring?

We currently manage 35 hectares of arable land and around 15 hectares of forest.

And what to you cultivate on your fields?

Mainly corn, spelled, malting barley and winter barley. We are almost the exclusive supplier for the establishments here in the region.

You also used to breed pigs. Have you stopped doing this?

Yes, we gave it up a few years ago. The animal husbandry is no longer profitable at our size. Now we focus on our fields and the woods.

You have your agriculture, the forest, you drive trucks, sometimes also excavators – how do you manage all this?

(Laughs) It works quite well. I'm simply work part-time, thus 12 hours. And after that, I do whatever is left over. Sometimes, after a long truck ride, I still add a few more hours of work in the fields or in the forest. However, the workload does not bother me – it is quite the contrary: There is no place where I can relax better than in my forest.

What is so special about it?

It is the aspect of working in and with nature. This has a grounding, soothing effect and ensures that you concentrate on the essentials. And at the end of each day, you can see the progress you have made. This is satisfactory.

And Pfanner is always with you.

Exactly, I am never without. I have now been a Pfanner customer for six years and my wife and my sons are also equipped by Pfanner. We have actually become true fans.

That's a nice closing line. Thank you for the talk.

**MY WIFE
AND MY SONS
ARE ALSO
EQUIPPED BY
PFANNER. WE
HAVE ACTUALLY
BECOME
TRUE FANS.**

Ventura Rain Jacket

- 35,000 mm water column
- Front zipper with wind flap
- Supple outer fabric
- Velcro fastener at sleeves
- Optimized cut
- High-closing collar with chin protection

NOTE

Not suitable for fir needles.
They pierce the membrane.

The Ventura Rain Jacket has a SympaTex membrane for reliable moisture protection with highest wear comfort. This membrane ensures water-tightness at maximum breathability. This way, the jacket is particularly suitable for physically demanding activities. The zipper in the armpits can be opened for an additional ventilation. The Velcro fastener on the sleeves can be adjusted individually and prevents the penetration of dirt and water. The new reflective stripes and 3CON® Reflex icons now provide the Ventura Rain Jacket with even better visibility and therefore additional safety.

- KlimaAIR® technology
- Fast access for weapon and tools with the side zipper
- Loop for radio communication
- Extremely tear-resistant and water-repellent outer fabric
- Waterproof shoulder and back reinforcement
- 50 cm long air vents in the underarm area
- Chest pocket with eye for signal band removal
- Spacious game pocket
- High-closing collar
- Individual ventilation in the back area

Tracking often picks up speed quickly. The jacket has to endure everything. The Tracking Jacket has an extremely tear-resistant outer fabric with which thorns are not noticeable. The StretchAIR® and KlimaAIR® technologies ensure breathability and maximum freedom of movement, which in turn increase the wear comfort. The additional ventilation at the back prevents collapsing due to overheating. A high-closing collar prevents the penetration of pine needles and other debris into the jacket. The Zipp2Zipp® chest pockets with the eye for signal band removal and reflective stripes ensure the visibility in the undergrowth.

Caroline Weinberger of Team Austria in action

Armin Tanner of Team Liechtenstein at the combined cut

The 2018 World Logging Championship in Lillehammer, Norway was a complete success for all teams and the main sponsor Pfanner Schutzbekleidung.

For the Austrian national logging team, the World Championship in Norway was a sensational success. The Austrian national team, led by team bosses Armin Graf and Johannes Kröpfel, took home nine medals. In the various disciplines such as combination cutting, precision cutting and target felling, the teams from Austria, Germany and Liechtenstein won a total of 7 golds, 5 silvers and 3 bronzes. All three national teams were equipped by Pfanner Schutzbekleidung with colour-coordinated protective clothing for the respective country and the matching Protos® Integral for all-round reliable protection.

Team Germany in full Pfanner protective clothing kit

KlimaAIR® Forest Jacket

- StretchAIR® technology
- KlimaAIR® technology
- Longer sleeves are sold separately (Item 107031)
- High-closing collar
- Extremely robust
- Waterproof shoulders
- Water- and dirt-repellent
- Zipp2Zipp® chest pockets
- 3CON® Reflex

The KlimaAIR® and StretchAIR® technologies in the KlimaAIR® Forest Jacket ensure the maximum comfort – for the entire year. The removable sleeves and the additional ventilation at the back guarantee work without collapsing even on hot days. The outer fabric is water- and dirt-repellent and extremely tear-resistant. This also ensures the longevity of the jacket. The innovative Zipp2Zipp® chest pockets provide storage and optimal access for a note pad or a mobile phone. The high-closing collar prevents the penetration of the branches and dirt.

Material

Upper: 90 % polyamide, 10 % elastane
Stretch fabric: 66 % polyamide, 26% glass fibre, 8% lycra

Ventilation Jacket

- StretchAIR® technology
- KlimaAIR® technology
- Unrestricted freedom of movement
- Water- and dirt-repellent outer fabric
- 50 cm long underarm ventilation
- Elastic functional cuffs
- High-closing collar
- Zipp2Zipp® chest pockets
- Reflective Paspol stripes

The extremely lightweight Ventilation Jacket is designed for warm working days. The breathable StretchAIR® technology guarantees maximum freedom of movement and breathability. The KlimaAIR® technology ensures the ventilation of the jacket, which can be maximized using the 50 cm long air vents in the armpit area. The Zipp2Zipp® chest pocket provides an easily accessible storage space. The high-positioned front pouch pockets are also accessible when wearing a tool or climbing harness.

Material

Upper: 92 % polyester, 8 % elastane

Ventilation Hi-Vis Jacket EN 20471

- certified warning colour EN 20471
- StretchAIR® technology
- KlimaAIR® technology
- Unrestricted freedom of movement
- Water- and dirt-repellent outer fabric
- 50 cm long underarm ventilation
- Elastic cuffs prevent the penetration of dirt
- High-closing collar
- Zipp2Zipp® chest pockets

Fog, darkness and other conditions with limited visibility demand an early detection for safety purposes. For this purpose, our Ventilation Hi-Vis Jacket complies with EN 20471. Our StretchAIR® and KlimaAIR® technologies ensure unrestricted mobility and optimum wear comfort. This jacket is designed and optimized for warm working days. The Zipp2Zipp® chest pocket allows easy access to materials and the high-positioned front pouch pocket provides sufficient space, even when wearing a tool belt.

REAL ALL-ROUNDERS

The tasks of functional clothing are diverse and vary according to activity. Whether for strenuous labour or in leisure time: It is crucial that you are equipped with the right clothes. And above all they must be able to keep: warm, cool and dry. In addition, they should prevent unpleasant odours and be extremely elastic and easy to care. Our lightweight functional shirts are not only breathable, quick drying and anti-bacterial, they also provide maximum freedom of movement. Further details such as extremely flat seams, offer even more comfort.

Merino AirSoft Cap

- Warms in cold weather
- Natural moisture management
- Soft merino wool for scratch-free wear
- Anti-odour
- Perforation for increased ventilation
- Pressure-free flat-look seams
- Perfect cap for under the Protos®

Item 107023

The Merino AirSoft Cap is an absolutely scratch-free thin headgear. Through the pressure-free flat-look seams it is ideally suitable as a cap under the Protos® Integral. The 100 % merino wool is odour-resistant. The perforations in the cap allow for maximum ventilation and therefore optimum climate at the head. Due to the natural moisture management, the Merino AirSoft Cap can absorb a lot of liquid without feeling wet.

Zip-Neck Shirt, Neon

- 37.5 Cocona technology
- StretchAIR® technology
- Minimal moisture absorption
- Lightweight
- Extremely elastic
- Odourless
- High colour fastness
- Zipp2Zipp® chest pockets

The Zip-Neck Shirt in neon colour is the top seller when it comes to the first layer on the skin. The shirt has been improved with 37.5 Cocona technology. 37.5 stands for the constant body temperature of 37.5° with maximum physical performance. The fabric immediately wicks away excess moisture and heat, keeping body temperature constant. Odour particles are trapped and only released during washing. The material is therefore absolutely odourless.

Merino-Modal Shirt

- To keep you warm in cold weather
- Fast drying
- Anti-odour
- Easy-care
- Functional cut
- Flat-look seams
- High-closing collar

The inside of the Merino Shirt long-sleeved carries scratch-free Modal. This ensures a constantly dry feeling. With its optimal insulating properties, the outer merino wool ensures the ideal body climate. The design of this shirt conducts moisture away from the skin, thus keeping the body dry. In addition, the merino wool does not absorb odours, thus guaranteeing perfect wear comfort. This shirt is the perfect companion, especially in cold temperatures and during less strenuous activities.

V-MATIC Hooded Shirt

- V-MATIC for maximum freedom of movement despite the hood
- Extremely scrub-resistant
- Armpit insert made of 100 % merino wool
- Extra-long cut
- Very light
- Ideally combinable with the Protos® Integral

The V-MATIC Hooded Shirt is the perfect complement under the Protos® Integral. The low-cut V-MATIC collar allows unrestricted freedom of movement, even when wearing the hood. It provides a continuous protection on cold days, from the head right down to the buttocks. With the extra-long cut, the shirt cannot slip out of the pants and thus the kidneys are always protected. The pressure-free flat-look seams ensure a pressure-free wearing under clothes and the Protos®. The armpit inserts are made of 100 % merino wool and inhibit skin irritations and odour formation.

S. 69

For Christian Rimpl-Modlinger trees are the greatest living thing ever. His aim is to protect and maintain them. Since 2008 he has been self-employed with his company "plan B Baumpflege, but tree care is not only a profession for him, but rather a calling and passion. This also explains his very special attitude toward his fosterlings.

Christian, you say, trees are unique living things, whose needs must be addressed individually and carefully. That sounds very loving.

Yes, it is meant that way. I love trees and I have great respect for them. And based on this understanding I define our way of working. Primarily, we want to ensure that trees are healthy and safe, that we support them in their vitality and that we deal with them in respect and awe. We also try to communicate this to our customers.

Nevertheless, it is part of your work, to cut down trees from time to time. Doesn't it hurt?

No, it is not that extreme. It's similar to people who are sick – sometimes the situation requires appropriate measures. And if a tree is beyond remedy, then one must also accept that felling is the final step. Indeed, sometimes this also concerns the safety of people or buildings. Those are priorities of course. But of course we try everything to help the tree and to preserve it.

Speaking of safety: Is your job dangerous?

Of course, the risk of accidents is high when you climb in trees, up into the crowns and starting cutting it down. Indeed we rarely employ risers, but are actually up in the trees. But first and foremost, we have a highly qualified staff, we constantly receive training and of course we pay particularly attention to all safety-related criteria.

What role does the right work wear assume?

A very important one of course. It happens now and then that one time slips during cutting. Then the right protection is crucial. Or sometimes a branch breaks off in an uncontrolled manner. In that case a functioning head protection is primordial. With Pfanner protective clothing we always feel good. And have made positive experiences for many years.

You work out in the open all year round. That's not always comfortable.

That's right. But even here we rely on Pfanner. Besides work safety, which provides us with the protective clothing, it is also about comfort, functionality in various weather conditions and good visibility. Pfanner fulfills all these requirements – whether in summer or winter. Also, I simply enjoy my job, no matter what the weather is.

This passion for trees – where does it come from?

I already had it as a child. That's why we try to also inspire children for trees in the context of an annual event. As part of an adventurous climbing experience they can go all the way up the green giants. And the joy that I see in their eyes, is the best proof for me that I'm quite normal – as far as my tree love goes (laughs).

That's a nice last statement. Thanks for the talk.

PERFECT HANDLING

Optimum grip in any weather – warm, dry hands and pleasant wear comfort. Important characteristics that make a good work glove. We also combine all our skills on this issue. We coat – depending on the application – our products with various surface finishes and strengthen the palm areas. Your hands are thus well protected and the glove itself extremely durable. In production we also rely on our proven StretchFlex® technology. This ensures a high shape-retention and thus gives the glove an even better fit and an extremely high breathability.

UNIVERSAL GENIUS

One garment is of particular importance: Pants must function differently depending on the application area, in any case, they must withstand a lot and still provide maximum freedom of movement. In forestry, extreme tensile strength is required, in other areas, an increased visibility or the repellence of dirt, oil and water are the priority. But we do not only offer suitable pants for extreme conditions in the profession, but also for extreme outdoor activities during leisure time.

Globe Outdoor Pants

- Kevlar knee and leg inside reinforcement
- StretchAIR® technology
- Zip-able gaiter
- Moisture- and dirt-repellent
- Fast drying
- Reflective Paspol stripes

The Globe Outdoor Pants are perfect for demanding outdoor activities. Here, maximum freedom of movement meets a water- and dirt-repellent fabric and all this at an extremely low weight. The material is very breathable and robust. The Kevlar reinforcement on the knees and leg inside increases the durability and provides extra protection while climbing. The zip-able gaiters protect from ticks and dirt.

Impact Clearing Saw Pants EN 20471

- StretchAIR® technology
- Gladiator® fabric on the front
- Impact protection in the front area
- Ventilation insert at the waistband
- Vents on the back of the leg
- Preformed knee reinforcement
- EN 20471 class 2

Our experience in the forestry and outdoor areas are combined in these pants. The stretch fabric provides pleasant wearing comfort and StretchAIR® ensures maximum functionality. The pants are equipped with a special impact protection in the front area, which provides additional protection for the legs. The ventilation insert at the waistband and the vents on the back of the leg offer added breathability.

Loden Pants

- Noiseless and dirt-repellent merino Loden fabric
- Cocos lining
- Practical cut
- High kidney protection
- Knife pocket
- Zip-able gaiter

The Lodan Pants are the perfect combination of the expertise of the outdoor area with the traditional Loden fabric. This way, these pants offer a practical cut and are absolutely noiseless. The Cocos lining with the natural fibres prevents skin irritation and provides maximum wear comfort, since it wicks moisture away from the body and does not store it. It is also thermo-regulating and odour-inhibiting. The zip-able gaiter protects against dirt and ticks.

Gert Mürmann is a passionate hunter – in two counts. On the one hand he is an active hunter himself, on the other hand, he is a passionate dog handler and accompanies driven hunts throughout Germany with his colleagues and his flushing dogs. Also always with him: Pfanner protective clothing.

Gert, you are very versatile. What is your job and what your calling?

(laughs) I cannot make a very precise distinction. My day job is the tree care and protection. Our company, which currently employs about 10 employees, specializes in robe climbing and rigging technique, which allows us to cut down trees safely and orderly – and this within very small space. Besides this, I have a passion for the breeding and training of flushing dogs, which brings us to the hunt. Since I do not make any money with it, I suppose it is more a passion. I feel called to all three areas of my activity.

How does hunting with flushing dogs work?

Flushing dogs have their strength in the driven hunt. Here the dogs flush the game – especially red and black deer – bring it to the legs and then in the direction of the hunter. We work with up to 20 dogs: Terrier for the movement and hounds as finders. This is quite demanding. We go uphill and downhill with speed and, since the main hunting season for driven hunts is from early October until the end of January, not infrequently through snow and wet terrain.

This means, that you must keep very fit.

Yes, but that is not a problem. The tree care makes sure of this. I hang on the rope every day and climb around. That's sufficient as a fitness program.

You live in Witten near Dortmund. Where do you hunt with your dogs?

We are booked for driven hunts all over Germany. For this, we are on the road up to four times a week. This

is only possible during the time when the tree care business is not so busy and I am dispensable in the company.

And the protective clothing of Pfanner is your constant companion?

Yes, right. For tree care as well as hunting.

What do you appreciate about the hunt clothing from Pfanner?

Firstly, it convinces with extremely good wear comfort. This is important if you are out all day. Secondly, with Pfanner, I am optimally equipped for wind and weather. And thirdly, a safety aspect also comes into play. This becomes relevant in part for the colours and also for the direct contact with game. It is important to be well protected, especially for tracking. One can imagine that encounters with an injured animal are not always pleasant.

Do you have a favourite piece for hunting?

Yes, my Pfanner Tracking Pants. With it, I feel comfortable and safe. It also simply looks good.

Do you still have the time to go hunting yourself?

Not much, but of course I indulge myself in the odd hunting trip without dogs, just for me alone. It should always be possible to take this time.

Thank you for the talk.

**DURING

CHAINSAW PROTECTION

How does the Pfanner chainsaw protection work?

Chainsaw protection pants are protective clothing for working with a motor chainsaw and is intended to protect against injuries in the leg area. At the most vulnerable places in the front leg area, a layer of loosely woven, very long, fine, tear-resistant threads is integrated between the outer and inner pants materials from the ankle to the hip.

In case of contact, the chainsaw cuts the outer fabric and picks up the threads from the protective layer, which then wrap around the drive wheel of the chainsaw and block the machine in a split second.

Chainsaw protection trousers are defined by EN 381-5. There are two forms for the leg protection: The Type A is intended for professional chainsaw operators in conventional wood harvesting operations. The chainsaw protection is essentially limited to the front of the legs. The Type C is to be used by persons who are at risk of being injured by the chain saw on the back of the leg. Type C pants have the protection area on the front and back (enclosed protection).

The chainsaw protection pants are divided into 4 classes:
Class 0: up to 16 m/s, Class 1: up to 20 m/s, Class 2: up to 24 m/s, Class 3: up to 28 m/s

In a central application test the KWF (Board of Forestry and Forestry technology) checks the application value of personal protective equipment. The personal protective equipment used in the forestry sector is tested over 1 year at 13 test sites. The test sites are located in Germany, Austria, Switzerland, the Netherlands, the Czech Republic and Poland. The officials of the test sites pass the registered products on to professionals in the various forestry enterprises and supervise the test procedure. After a wearing time of one year the respective test persons assess the quality of the PPE with a specially developed questionnaire. The assessment includes the equipment, wearability, durability and wear resistance as well as the maintainability of the product.

The results of the KWF tests for Pfanner products can be found at www.pfanner-austria.at

Materials of high-quality, high-tech fibres are processed for Pfanner chainsaw protection clothing, to offer the wearer an extremely robust yet lightweight protective clothing. The water- and dirt-repellent equipment of the fabrics lend added wear comfort to the clothing. The permanent exchange with professionals working in extreme conditions guarantees our customers that Pfanner products meet the highest requirements. We attach importance to functionality, fit, comfort, durability and of course to the best design.

FPA recognition

ONLY CLEAN PANTS ARE SAFE PANTS

Washing instructions for chainsaw protection pants:

During use of the chainsaw protection pants sweat and oil regularly penetrates the layer of the chainsaw protection. This dirt agglutinates the fibres that ensure the chainsaw protection, and thus reduces the protective effect. In order to maintain the performance of the chainsaw protection, it is necessary to wash the pants properly on a regular basis. For daily use and average pollution, weekly cleaning cycles are recommended. If heavily soiled, wash immediately after wearing.

Preparation

In case of extreme contamination apply the detergency boosters, optimally mixed 1:1 with water, directly on the stain using a spray bottle and, if possible, allow to react overnight in water. Then remove the stain with a hand brush and wash the clothes as usual.

Machine wash

To ensure that the oil is removed from the washing machine, it is important to use liquid **colour detergent** and **not a heavy-duty detergent**.

Dose the colour detergent as usual. For 1 kg of dry laundry (chainsaw protection pants of 1.6 kg) add 10 ml detergency boosters in the detergent compartment for prewash.

ATTENTION

Start prewash at 40 °C and switch off the spin cycle!

The chainsaw protection pants must not be put through spin cycles.

The spin cycle of a washing machine acts on the chainsaw protection of the pants like a milling action and compresses the fibres. This would significantly impair the chainsaw protection.

Remaining forest clothes (work wear): Prewash at 40 °C.

After washing, pull the pants into form and hang to dry.

Under no circumstances put the chainsaw protection pants in the dryer. Like the spin cycle this has a negative effect on the chainsaw protection.

Storage and Transport

Chainsaw protection pants should be kept in a well-ventilated and dry room. Extreme temperatures and contact with fluids or UV radiation (e.g. showcases) should be avoided.

The Wash Power Enhancer from Pfanner and further care accessories for your protective clothing can be found at P. 217.

SAFE AT EVERY STEP

Whether on rugged trekking tours or for extreme work assignments: You need reliable companions that provide you with secure grip and protect you against injury on bumps and slippery ground. We have also applied our entire expertise in design and processing to the shoe sector. The result: extremely durable footwear that is unbeatable in terms of functionality and withstands all weather conditions.

On the following pages, we have present an exclusive range of lightweight trekking shoes, robust mountain boots and technically sophisticated forest shoes.

GOOD TO KNOW

Our high-quality shoes are handmade by qualified craftsmen. Unfortunately, it is becoming more and more difficult for our partner companies to find well-trained and technically talented employees in today's world where many manufacturers only use mechanical production.

Due to the prevailing shortage of skilled workers and the fact that each shoe is a custom-made and therefore a unique piece, unfortunately a longer delivery time of up to 6 months can result.

Kepron Salzburg

- KlimaAIR® technology
- No foams, no moisture accumulation
- 3 mm thick Swiss military leather
- Kepron outer fabric on the forefoot including cap
- Stainless copper chrome eyes
- Slip-proof, soot-free VIBRAM rubber sole
- Outsole exchange possible
- Kevlar instead of metal insoles
- Nano-Active Insoles
- Aluminium cap, puncture-proof

The Kepron Salzburg is the safety shoe that combines traditional craftsmanship with our KlimaAIR® technology. The shoe has a completely double-stitched frame. For this, two upper leathers are sewn together with a 3-fold sole assembly. This design provides maximum comfort and is odour-repellent. In addition, this design also allows an outsole exchange. The lightweight aluminium cap protects the forefoot from external influences. The soot-free and slip-proof rubber VIBRAM sole ensures the best grip.

- Self-cleaning profile
- Nano-Active Insoles
- Aluminium cap, puncture-proof

Given its materials and processing, the Nanoshield® Salzburg is a wear-free safety shoe for the most demanding missions. It consists of high-quality Nanoshield® leather, which is extremely easy to care for. The Nanoshield® Salzburg is perfect for construction, chemicals, food industry, agriculture and all outdoor work. The eyes are made of a stainless copper-chromium combination that does not bend. A lightweight aluminium cap protects the forefoot from external influences. The Salzgitter sole has a high scrub-resistance and a 100 % resistance to natural and chemical acids.

BOA® Verano air Shoes S1P

- Perforated upper for highest breathability
- Patented BOA® Closure System
- Pleasantly easy to put on and take off
- Quickest fine adjustment possible
- 3CON® Reflex for enhanced visibility
- Perfect one-hand handling
- Air-mesh fabric
- Composite cap
- Twist-free soles
- Heel reinforcement

The BOA® Verano air Shoes S1P are the lightest. The perforated leather upper ensures the breathability of the footwear. They are thus particularly suitable for the warm days. The BOA® closure also offers the convenience of quick putting on and taking off of the shoes. The leather-reinforced tongue and the wear-free eyes guarantee the longevity of the work shoes. The soot-free VIBRAM rubber sole makes for extremely good grip.

Matterhorn Chainsaw Protection Boots

- EN 17249 chainsaw protection
- Ceramic stud reinforced surface
- Aluminium protective toe cap
- VSS (Vario Support System) in the heel area
- Best grip VIBRAM alpine soles
- Narrow tread for effortless walking
- Multiple riveted double seams
- All-around hoisted rubble rubber edge
- Shock-absorbing midsoles
- Available with fittings

The unique VSS in the heel area offers maximum stability in steep terrain. The narrow outer soles make it possible to walk with minimum effort. The VSS construction has an especially cushioning effect when descending steep terrain. The VSS insert can be removed for flat surfaces and driving vehicles. Multiple rivets at the areas susceptible to abrasion and abrasion prevent wear of the double seams. Ball eyelets facilitate the lacing of the boots and prevent wear. The Matterhorn Chainsaw Protection Boots are equipped with a GORE-TEX membrane. The Nano-Active soles provide springy feel when walking.

Air Comfort Functional Socks

- High breathability
- Highest wear comfort through modal wool
- Rubber-free endings
- Antibacterial

Item 100988

We have optimized our socks and have exchanged tencel for modal. Modal wool is extremely durable, shape-retaining and more heat-resistant than its predecessor. The Air Comfort Functional Socks can absorb a lot of moisture without developing odours. Whether in working or outdoor shoes, the Air Comfort Functional Socks are perfect for warm days in low shows.

Material

75 % modal wool, 15 % polyamide, 10 % Lycra

Sizes

38-49

100% MEMBRAN FREE

Outdoor Light Functional Socks

- High breathability
- Highest wear comfort through modal wool
- Shock-absorbing effect
- Lower mesh density at the top

Item 101210

The Outdoor Light Functional Socks offer an increased comfort once again due to switching to modal wool. The low mesh density at the back of the foot ensures optimum evaporation for the foot. The pressure-free seams prevent chafing of the toes – even on long excursions. The Lycra fibre give the socks an optimal fit.

Outdoor Extreme Functional Socks

- 3-layer knit construction
- Inner layer of modal wool
- Middle CoolMax layer
- Outer layer made of polyamide and Lycra
- Shock-absorbing effect
- Ideal for demanding applications

Item 106775

The Outdoor Extreme Functional Socks are based on a 3-layer construction. The inner layer made of modal wool ensures pleasant wear comfort and moisture absorption. The CoolMax FreshFX technology of the middle part has an antibacterial effect and maintains the breathability and the cooling of the foot. The outermost layer is a mixture of polyamide and Lycra and guarantees the durability and fit of the socks. This model is perfect for challenging and demanding applications.

Material

50 % polyester CoolMax FreshFX, 25 % modal wool, 15 % polyamide, 10 % Lycra

Sizes

38-49

Merino Functional Socks

- Knitted according to 100 years of tradition
- High-quality merino wool
- Especially for cold temperatures
- Heel and toe are reinforced additionally
- Shock-absorbing effect
- Thin instep

Item 101240

We have changed the manufacture of these socks and it now follows a 100-year-old knitting method. This method significantly increases the wear comfort through the airy structure – an incomparable walking comfort. The merino wool does not absorb any odours and offers an optimal insulating capability. In addition, the wool conducts moisture away from the foot. The reinforced heel and toe areas makes the strained points even more durable.

ChainsenPro Shoe Snow Chains

- 11 Stainless steel claws
- Up to 14 mm serrated length
- Sturdy heel plate
- All eyelets reinforced - prevents tearing out
- Particularly robust during intensive use
- Flexible elastomeric rubber
- Can be put on and taken off in seconds
- Without additional straps and buckles
- Light and compact - 320 g (M)

Item 107173

Material

Chain: 100 % hardened stainless steel
Sling: Elastomer rubber with POM eyelet reinforcement

Sizes

M (36-40), L (40-44), XL (44-48)

The ChainsenPro Shoe Snow Chains provide perfect grip on ice, snow, slippery or steep terrain. This makes them the ideal companion for mountain and hiking tours, as well as work and rescue missions. The shoe snow chains are suitable for a wide range of shoes, from lightweight hiking boots to insulated rubber boots.

The POM eyelets prevent the chain from tearing out. The elastomer rubber, which is flexible down to -20 °C, ensures that the chain can be put on and taken off in seconds. The total weight is only 320 g and fits into any backpack with the practical packsack.

40 (M) ● 51 (L) ● 90 (XL) ●

Shoetree

Adjustable Shoetree made of wood. Extremely important for soaked leather shoes. A deformation of the shoe during drying is prevented using uniform pressure.

WE ARE ON YOUR SIDE

Pfanner worldwide

We own a dense network of distributors all over the world, which we are constantly expanding. We are also expanding our distribution channels constantly, to meet the rising demand. If you are looking for our products and the dealer nearest you: On our website www.pfanner-austria.at you can find your contact.

Repair service

Is your zipper faulty or do you even have a hole in the outer fabric of your pants? Just send a short description of the fault and if possible a photo to your dealer* or directly to info@pfanner-austria.at. Our customer support will quickly and easily find the ideal solution for you.

Order and product information

If you want to place an order or have any questions about our products, please give us a call. Our service team is available by phone from **Monday to Friday from 08.00-17.00 clock** at **+43 (0) 59 50 50-200**. We also look forward to receiving e-mails. Please send them to info@pfanner-austria.at

Returns

You may return or exchange our products within **14 days** of purchase.* For this, please fill out our return form completely, so that we can process your return quickly.

* Please observe the applicable requirements of your dealer and the corresponding laws in the respective country.

FINISHING

Image clothing

Strong appearance with image clothing. It is like your own textile business card. With materials that are colour-matched to the corporate design and your logo or lettering you can set company-specific highlights and promote the recognition value. Positive side effect: Image clothing also enlivens the team spirit of your employees. We support you in the colour design and the placement of your logo and advertisement by printing or embroidery at the appropriate location. Consultation, design and final artwork for the clothes are free of charge for you. We look forward to your inquiry. Simply contact us at info@pfanner-austria.at or by phone at +43 (0) 59 50 50-200.

Transfer badges

Transfer emblems are an excellent choice, especially if sharp contours and small subtleties must be implemented properly. T-shirts, sweat-shirts and polo-shirts are ideal for the application of this technique. But your prints will even appear perfectly on stretch materials and functional clothing. If not all logos are needed for the job, we will store them free of charge for you. This way we can quickly produce small quantities or single items for you in subsequent orders. Starting at 25 identical emblems, we will perform your printing request.

Screen printing

The classic printing process is extremely durable, resistant to washing and ideal for larger quantities, starting at 50 items. T-shirts, sweat-shirts, polo-shirts and bags can be finished with colour gradients or multi-coloured motifs. Even photorealistic prints are possible. Almost all textiles can be printed with an almost unlimited choice of colours. The colour is completely water-based and safe for the environment.

Stick

Your protective clothing can obtain an appearance of especially high quality, if the logo or lettering is embroidered into the fabric. An embroidery feels good and provides great durability. Our first-class machines, needles and yarns as well as our experience over many years are the basis for a high-quality result. A wide range of thread colours allows us to present your motif in HKS or Pantone shades. In addition, this method is also applicable for smaller quantities. We only charge a small surcharge for less than 12 items. We embroider almost all types of textiles directly on the fabric. Our interchangeable Velcro variants are also very practical.

Plot

Printing your name, large lettering or less detailed logos can be implemented perfectly with this method, even in small quantities. We produce plot prints in different colours or even with light-reflecting effects.

FINISHING ON JACKETS

- Transfer, for 25 or more items, 1 to 6 colours
- Plot, for 1 or more item(s), 1 colour
- Direct embroidery
- Sewn on embroidered badge
- Embroidered badge with fleece and Velcro

You can request more design options, also for shirts and shorts, via e-mail to info@pfanner-austria.at or phone +43 (0) 59 50 50-200.

WE PUT EMPHASIS ON SUSTAINABILITY

Sustainability as a corporate goal

Sustainability is a priority for us. And especially because we go hand in hand with the forestry industry, our most important principle of action is to deal responsibly with valuable resources. Based in one of the most beautiful regions of Central Europe, we have the treasures of nature before our eyes every day. In order to preserve them for our children, we see it less as a duty and rather as a natural desire, to minimize the environmental footprint in the manufacturing of our products.

Made in Europe

To manufacture our products we only use high-quality fabrics and accessories from Europe. Regionality is important to us and therefore the majority of employed materials originates in Austria and neighbouring Switzerland. Short transport routes in our European production facilities save time, money and protect the environment.

Investments

In recent years we have invested a lot. Among other things, in the development of our power supply, since our warehouses now use solar energy instead of oil burners. We are also environmentally conscious during the transport and within the Vorarlberg region we rely on low-emission electric vehicles.

What you currently hold in your hands

This catalogue and all other print advertising materials are printed on recycled or PEFC-certified paper and the process is climate-neutral. Even our packaging, consisting of a mix of recycled and FSC paper, is recyclable.
